# Flexible and cost efficient TX Single System

Loading and unloading. Linking of the Slide Rail system to the Trolley system is the most cost effective way of bridging long distances to the static stock.

The simple and reliable switch changes the direction of flow.

Arrival and departure buffer.

TX Single System is a cost efficient warehouse handling system for hanging items. You will get a solution that puts good use to every square meter of your facility, and that provides you with a high capacity operation.

TX Single System is ideal when you need to handle each garment individually in your process.

The system is very flexible and we provide custom made solutions spanning from the small manual warehouse to fully automatic solutions.

The system can of course be joined to the different machines and work stations required for your process; such as unpacking, finishing, bagging and tagging.

## Both automated processes...

## ...and manual single handling

## Manual single handling is smooth...

## ...with TX 200 Slide Rail

Easy to manually push many items simultaneously, due to the plastic covering on the slide rail.

## TX 200 Slide Rail

## ...with TX Single System

**Transportex International AB** has supplied warehouse solutions for hanging goods since 1976. We added flat storage and shop fittings into our range during 2002.

Our head office with production and warehouse is situated in Kungsbäcka, Sweden. In 2001 we established production facilities and a service organisation in Lage/Lippe, Germany.

Our main objective is always an optimized operation for our customers, therefore we always build custom made solutions to achieve the best possible flow. Flexibility, reliability and long term relations are important key words for us at Transportex.
